The *Copper Stopper*[™] Termination Flange

COPPER STOPPER[™]

TERMINATION FLANGE

Why Use The *Copper Stopper*?

The *Copper Stopper* termination flange transitions copper tube back to standard pipe, reducing the amount of tubing required for a job and protecting the line from damage.

Copper Stopper Benefits

- Allows the installer to finish the job and pressure test the system on the first visit to the site.
- Eliminates the several feet of excess tube that is required to protrude through a wall awaiting the final hook-up of an appliance.
- Prevents any potential damage to the copper tube that could be caused by exposure in unfinished rooms awaiting future installations.
- Fits all 3/8", 1/2", and 5/8" flare MIP fittings and can easily be joined to standard FIP fittings.
- Suitable for both indoor and outdoor applications.
- Leaves a clean and professional finish.

- Transitions copper tube back to standard pipe
- Protects the line from damage
- Easy to install
- Provides a professional looking installation

Kamco's Got You Covered For All Your Installation Needs

Kamco Products is the leading manufacturer of polyethylene coated copper tubing in North America for Natural Gas, Liquefied Petroleum Gas, Fuel Oil, Potable Water and various industrial applications.

At Kamco, we are dedicated to providing our customers with superior quality products that help make their installations easier and more efficient. And we back that quality up with a strong commitment to outstanding customer service. We listen to our customers. In fact, the innovative products we are recognized for have all been inspired by our customer's suggestions and requests.
